Assignment – Full-Stack Application

Objective

Build a full-stack web application of your choice. We don't want to limit your creativity. You decide what to build (e.g., a Todo List, a Blog, an Inventory System, a Food Menu Management System, etc.).

Basic Requirements (Must-Have)

Backend: Java Spring Boot

- User Login & Register
- CRUD
- Database: MongoDB or SQL (PostgreSQL/MySQL/etc)
- RESTful API

Frontend: Separated from backend (frontend-backend separation)

- HTML/CSS/JavaScript OR
- Framework (React/Vue/Angular)

Git Version Control

- Clear commit history

Bonus Features (Optional)

- JWT Authentication
- Search/Filter/Sorting
- File/Image Upload
- Application Logging
- Responsive/Clean UI
- **Any creative feature you think adds value**

Notes

1. Upload your code to Github, make it public
2. Email the Github URL, employment form and resume to bill.hong@neurogine.com
